

# OLAYINKA AKANJI

Lagos, Nigeria | akanjiolayinka01@gmail.com | +234 704 298 8074 | github.com/akanjiolayinka | linkedin.com/in/olayinka-akanji-a9262a355 | leetcode.com/u/OLA\_YINKA123

## EDUCATION

University of Lagos

Lagos, Nigeria

B.Sc. in Computer Engineering; CGPA: 4.20/5.00

## EXPERIENCE

Software Engineering Intern — Nithub, University of Lagos

Mar 2025 – Present

- Built and deployed backend services in Go and Python, contributing to caching and asynchronous-processing improvements that reduced API response latency.
- Designed and implemented RESTful API endpoints for a service handling a high volume of daily requests.
- Optimized database queries through indexing, elimination of N+1 query patterns, and connection pooling, measurably cutting query execution time.
- Set up CI/CD pipelines with GitHub Actions, reducing deployment time from ~18 minutes to under 4 minutes.
- Introduced Redis caching to cut repeated database reads, and wrote unit/integration tests to reduce regressions.

## PROJECTS

Ultra-Fast Key-Value Cache

github.com/akanjiolayinka/Ultrafast-kv — Go, TCP, fasthttp

- Built a sharded in-memory KV store using djb2 hashing, with 700K entries per shard pre-allocated to eliminate GC pauses.
- Applied kernel-level TCP tuning and fasthttp for zero-allocation request handling; containerized with support for 1M+ file descriptors.

Go HTTP Server (Built from Scratch)

github.com/akanjiolayinka/Https-server — Go, raw TCP sockets

- Implemented a custom HTTP/1.1 server with manual request parsing directly off a TCP socket — no net/http — including routing, gzip compression, and persistent keep-alive connections.
- Benchmarked with oha at 200 concurrent clients: 19,350 req/s, 100% success rate, p50 4.4ms / p99 18.2ms latency across 10,000 requests.

VendorMind — WhatsApp AI Sales Agent Platform

github.com/Zenmisan/vendormind — Bun, Fastify, PostgreSQL/pgvector, Prisma, React

- Built a live WhatsApp AI sales agent platform for African merchants, integrating Groq, Claude, and OpenAI models to handle customer conversations end-to-end.

## TECHNICAL SKILLS

**Languages:** Go, Python, JavaScript/Node.js

**Backend & Systems:** FastAPI, REST API design, system design, TCP/networking

**Data & Infra:** PostgreSQL, Redis, pgvector, Docker, Git

**AI/ML Tooling:** LLM APIs, LangChain/LlamaIndex-style frameworks, LangGraph, RAG & vector databases

## ACHIEVEMENTS

- Finalist (Top 9) — Cavista Hackathon, out of 400+ participants and 40+ teams.
- Solved 300+ LeetCode problems and 180+ HackerRank problems.
